

*Stomper
in the
Ice Cave*

ETHAN MORGAN

Cast of Characters

- **Stomper** is a small white and blue yeti. He's friendly and he's funny. He does not have special powers. Stubby claws, medium voice, grilled cheese sandwiches are his favourite. The people love Stomper.
- **Sandy** is a tall person but yellow and covered in sand. They eat and live in the sand. And Sandy is the same name as Sandy the species which is the sand person. Sandy can survive and thrive in +58 to +92°C.
- **Hoover** is the species A Wing In It. Favourite food is sand rocks and sand mice. Looks a lot like a pterosaur with long wings but no feathers and a big head with a long beak with teeth. Looks like a dinosaur. Has a wing span of 5 feet.

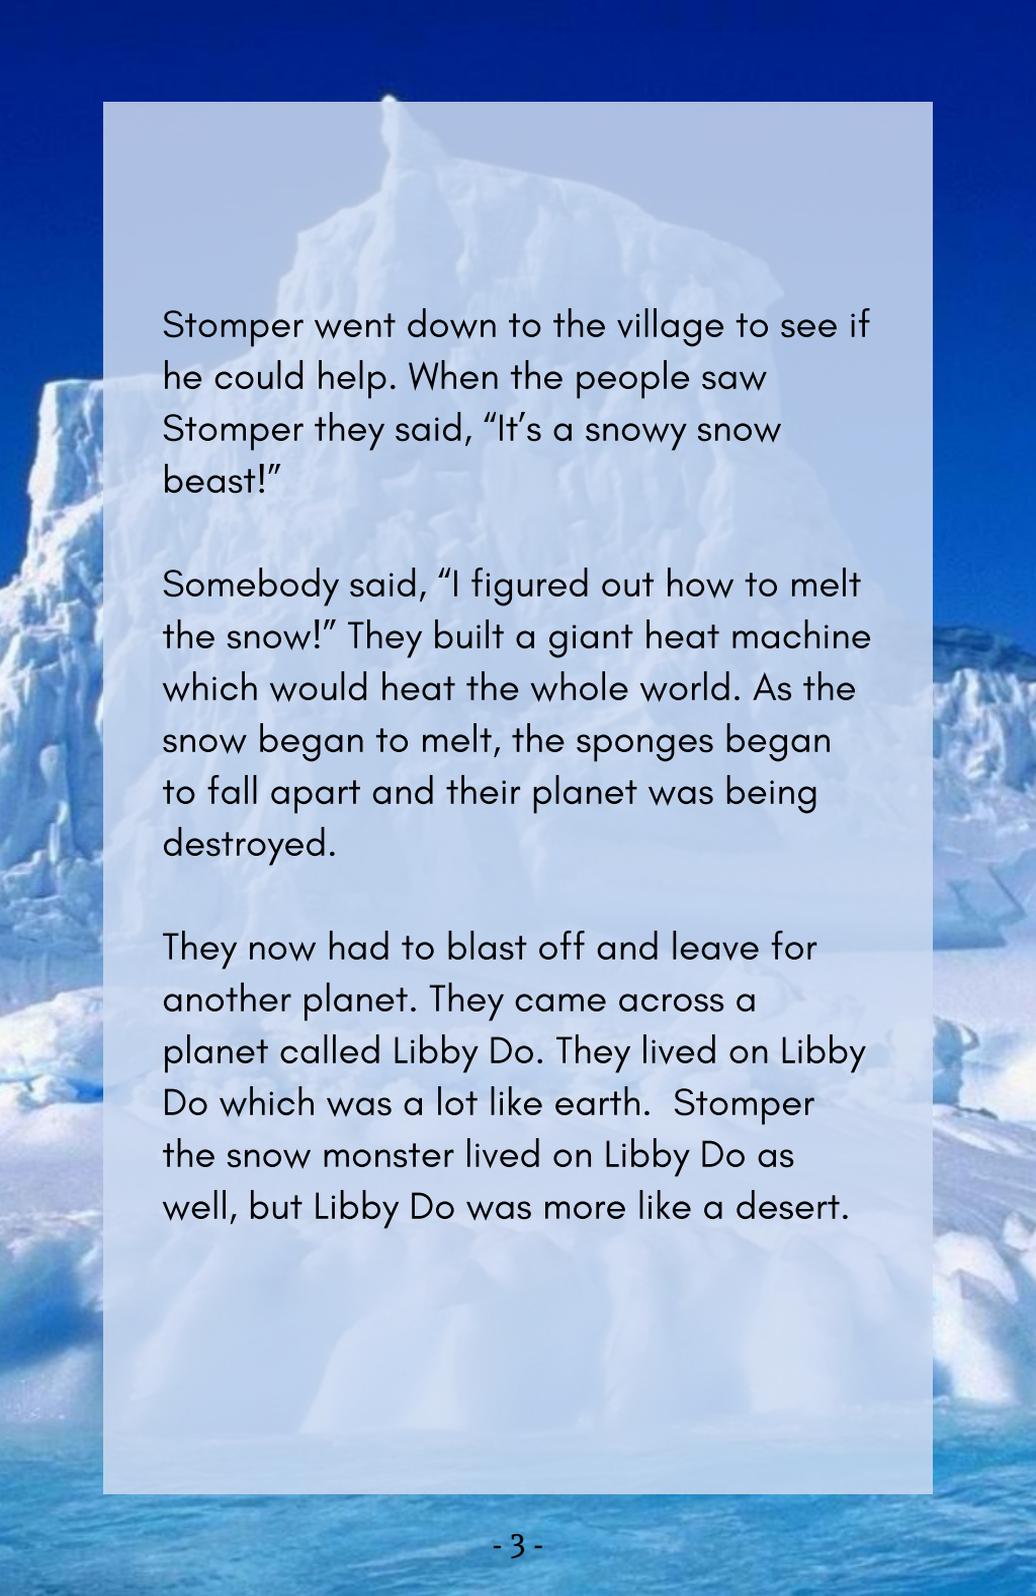

Chapter One

In the year 4072 flying cars and floating houses were a thing of the past.

The earth is gone, and the people all live on Ice Clean. It's a planet made of giant frozen sponges and mops.

In the giant cave of sponges lives the free monster named Stomper. All the people were fussy, and trying to clean their houses that were made of mop brooms. People roll giant sponge monsters all over the place to clean. People lived in giant recycling bins that were overturned to create condo buildings.

There was only one job: trying to figure out how to melt the snow. The only other jobs were taking care of sponge monsters, or getting groceries.

Stomper went down to the village to see if he could help. When the people saw Stomper they said, "It's a snowy snow beast!"

Somebody said, "I figured out how to melt the snow!" They built a giant heat machine which would heat the whole world. As the snow began to melt, the sponges began to fall apart and their planet was being destroyed.

They now had to blast off and leave for another planet. They came across a planet called Libby Do. They lived on Libby Do which was a lot like earth. Stomper the snow monster lived on Libby Do as well, but Libby Do was more like a desert.

Chapter Two

The desert presented new challenges for Stomper. He was adapted to living in -81 to -86°C . The new planet's lowest temperature usually goes to. $+6^{\circ}\text{C}$

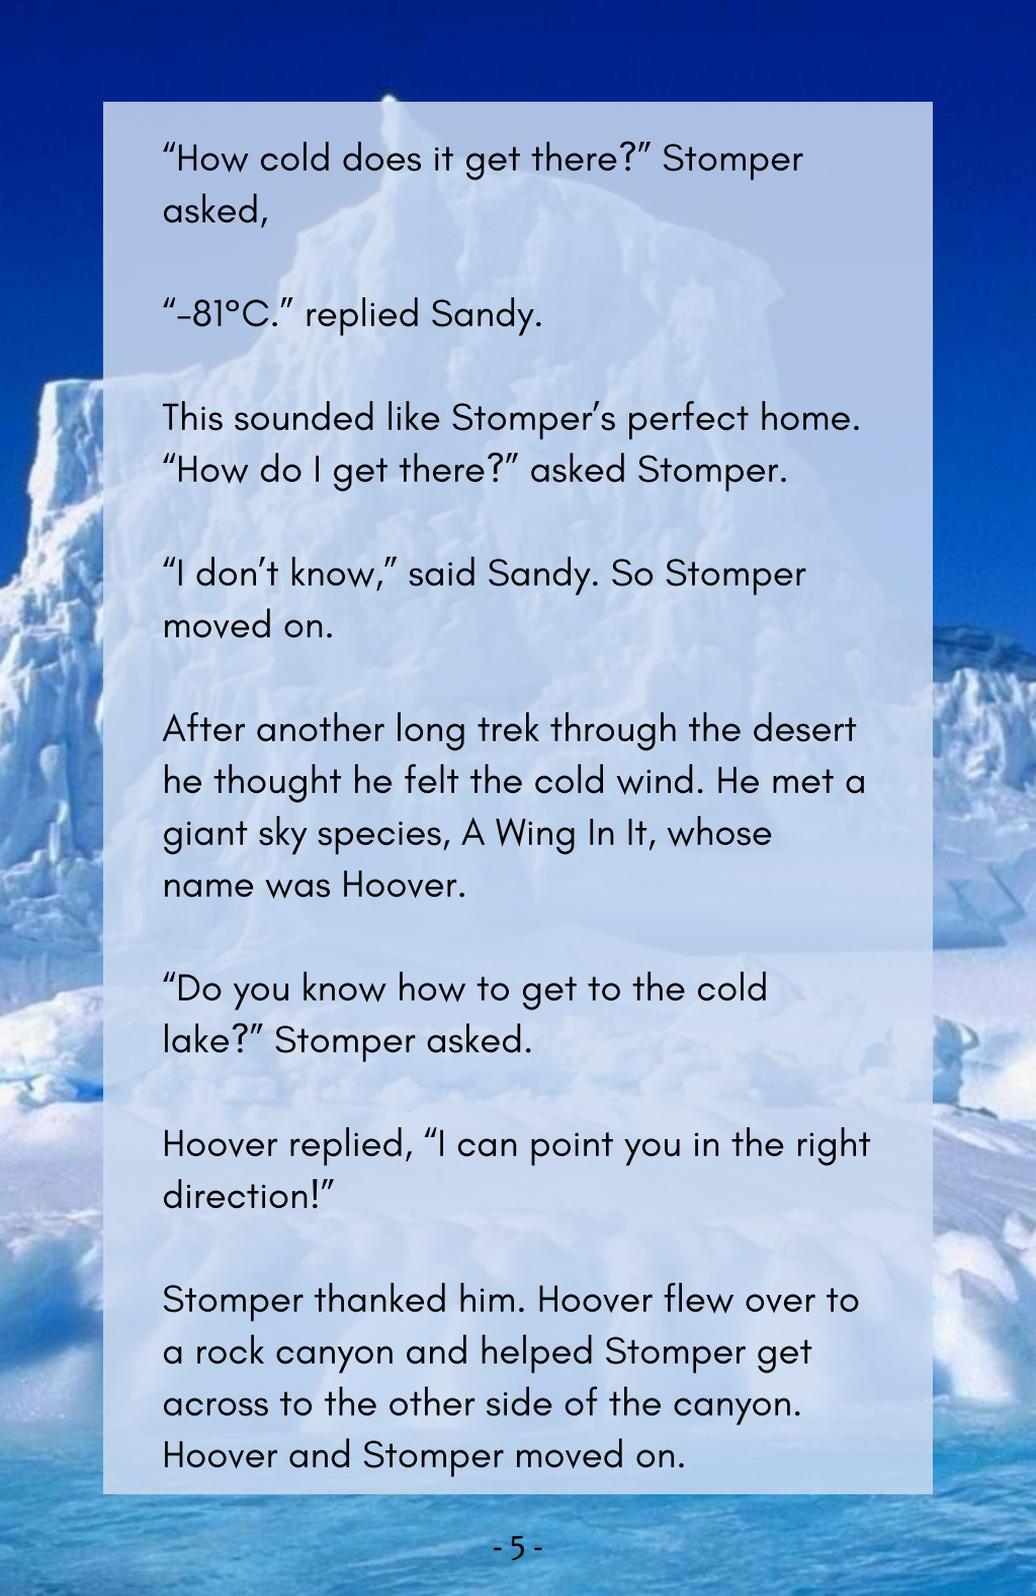

Stomper would have to adapt to deal with the very hot temperatures of his new home.

The people were now living in giant sand dunes. Stomper started a long trek to find cold but little did he know it would be harder than he thought.

The first thing he encountered was a desert alien called a Sandy.

Stomper said to Sandy, "Where is the coldest place on this planet?"

Sandy replied, "The cold lake. It's the coldest place on the planet."

"How cold does it get there?" Stomper asked,

"-81°C." replied Sandy.

This sounded like Stomper's perfect home.

"How do I get there?" asked Stomper.

"I don't know," said Sandy. So Stomper moved on.

After another long trek through the desert he thought he felt the cold wind. He met a giant sky species, A Wing In It, whose name was Hoover.

"Do you know how to get to the cold lake?" Stomper asked.

Hoover replied, "I can point you in the right direction!"

Stomper thanked him. Hoover flew over to a rock canyon and helped Stomper get across to the other side of the canyon. Hoover and Stomper moved on.

Chapter Three

When Hoover and Stomper came to the mountain, Mount Sand Dune the biggest flufftery blustery mountain in the world.

The climb of Mount Sand Dune would take days. Luckily Hoover could fly Stomper to the top in just a matter of minutes.

At the top of the mountain Stomper and Hoover were surprised to find a rocket ship. They climbed in the rocket ship and took off for the nearest planet.

When suddenly their ship crashed. And there was the entrance to the cold lake.

Stomper went in but Hoover had to stay out because he was more adapted for heat.

It was nice and cool in the cold lake and there were a whole bunch of replicas of Stomper!

“Stomper went back outside to say goodbye to Hoover who said he would see him sometime soon. Then Hoover flew off towards the hot side of the planet.

Stomper went back in to enjoy the cold lake, which was inside an ice cave.

Stomper and all the other stompers lived happily ever after.

The End

About The Author

Hi I'm Ethan!

I'm 10 years old and wrote this book to bring awareness to change and the Rare Disease Foundation. I personally really like the story and think it would make a great story for bedtime. Or quiet time or just reading in general. I'll also throw in a fun fact at the very end of the book.

Thank you for reading this book and please read the next two pages for the Rare Disease Foundation page and the fun fact page.

This book is in support of the Rare Disease Foundation

The Rare Disease Foundation is an amazing foundation that helps kids and adults with rare disease. They are using micro grants to help cure rare disease. By purchasing this book, half of the money spent will be put towards the Rare Disease Foundation. I wanted to write this book and put the section at the end to bring awareness to the Rare Disease Foundation. But also to people with rare disease, because I also happen to have a rare disease.

Thank you for reading about the Rare Disease Foundation and for your support!

Fun Fact

The largest living land mammal is the African elephant. Indricotherium--a herbivore that lived in the forests of central Asia between 34 and 23 million years ago, weighed as much as three or four adult African elephants.

Indricotherium fossils--found by Roy Chapman Andrews, a young scientist from the American Museum of Natural History, in Mongolia in 1922--indicate this giant was the largest land mammal ever discovered.

Weighing as much as 20 tons as an adult, Indricotherium could stretch its long neck to nibble leaves high in the treetops of the central Asian forests. Needing to eat massive amounts of vegetation to survive, Indricotherium suffered as the central Asian forests were replaced by grassland habitats, causing this huge mammal to become extinct.
